PhysH308

Continued review of Newtonian Mechanics
Ted Brzinski, Sept 7, 2024

Course logistics

- Exam 1:

  - I will post tomorrow or Saturday (I'll send an email)

  - Take-home, self-timed (still writing, but I'm aiming for 90 minutes or less)

  - Open notes

  - Due eight days from posting. No exceptions or extensions. (Recall, you'll have 6-7 more chances!)
Problems for Tuesday

- 3.5 - Billiards, elastic collision

- 3.10 - a tricky rocket problem.

- 3.22 - Finding the center of mass

momentum P that way — No momentum

momentum P that way — momentum 2P that way

Squirrel

1.21 gigawatts

https://blog.xkcd.com/2008/02/15/the-laser-elevator/

Problems for Tuesday

- 3.22 - Asks you to explain
  $$dV = r^2 \sin\left(\phi\right) dr\, d\theta\, d\phi$$
  in spherical coordinates

- Here's how I'd do that for
  $dV = r\, dr\, d\theta\, dz$ in
  cylindrical coordinates...

Problems for Tuesday

- 3.22 - Asks you to explain
  $$dV = r^2 \sin(\phi)\, dr\, d\theta\, d\phi$$
  in spherical coordinates

- Here's how I'd do that for
 $dV = r\, dr\, d\theta\, dz$ in
  cylindrical coordinates...

Problems for Tuesday

- 3.22 - Asks you to explain $dV = r^2 \sin(\phi) \, dr \, d\theta \, d\phi$ in spherical coordinates

- Here's how I'd do that for $dV = r \, dr \, d\theta \, dz$ in cylindrical coordinates...

$rd\theta$
dz

dr

$r \, d\theta + dr \, d\theta$

  cylindrical coordinates…

Problems for the week

Tuesday:

- 3.5

- 3.10

- 3.22

Thursday

- 3.26 — lays the groundwork for orbital mechanics!

  Be rigorous! You have everything you need to prove each part in a few lines!

- 3.30 — Moments of inertia refresher

  Taylor's notation for cylindrical coordinates (ρ instead of r) is annoying - sorry!
